Course	College/University	Year	CGPA/%
B-Tech	Pranveer Singh Institue of Technology	2020-2024	80.8%
Intermediate	Dr.Rajendra Prasad Inter College	2019-2020	69.0%
High School	DBS Inter College	2016-2017	81.7 %

EXPERIENCE

- **Technical Trainer (Python,DSA) at MUIT, Noida** July 2024 - Dec 2024
 - Conducted training programs on Python programming and Data Structures and Algorithms (DSA), combining theoretical concepts with hands-on exercises. The sessions covered topics from basics to advanced, including Python syntax, OOPs, data manipulation, and algorithm design, with a strong emphasis on problem-solving and real-world coding challenges.
- **SDE-I at RASA Consultancy Services,Bengaluru** Jan 2025 - Present
 - Versatile software developer skilled in building dynamic web applications using React for responsive and interactive front-end experiences.
 - Proficient in Flask for developing efficient backend APIs and SQL for structured data management, ensuring scalable and high-performance solutions.
 - Currently developing a Real-Time Multi-Modal Transportation System for train, flight, and ship tracking, integrating real-time updates and seamless user experience.

PROJECTS

- **Car Lane Detection** Jan 2023- May 2023
 - Developed an engaging and interactive system that not only identified lanes but also incorporated real-time feedback mechanisms to enhance the user experience. This was achieved through visually appealing graphics and immersive audio cues that made the system intuitive and easy to use.
 - The project placed a strong emphasis on user-friendly design principles. By incorporating iterative design and regular feedback loops, the system achieved a remarkable 80% user retention rate, highlighting its practicality and usability.
 - The lane detection system was built using a combination of computer vision tools, such as OpenCV, and machine learning frameworks. The integration of robust algorithms ensured precise lane detection even under challenging conditions, such as low lighting or adverse weather.
- **Real Time Transportation System** Jan 2025- Present
 - Developing a real-time transportation system with a secure login authentication module and an intuitive home page for efficient navigation.
 - The system provides real-time updates and seamless user interaction, ensuring a smooth experience. Built using React for a dynamic and responsive front-end, Flask for backend processing and API integration, and SQL for structured data management. Implemented efficient state management, optimized API calls, and ensured scalability for high user traffic.
 - Focused on user-friendliness, accessibility, and performance optimization, making the application highly interactive, reliable, and scalable for real-world transportation management scenarios.

ACHIEVEMENTS

- Hackerrank Certified in Python Programming language
- 310 Rank in Biweekly Contest On Leetcode
- 2856 Global Rank In Google Hashcode Round(A)
- NCC "C" certificate With "A" Grade

TECHNICAL SKILLS

- **Languages:** Python, HTML, CSS, React.js, SQL
- **Tools & Libraries:** NUMPY, OpenCV, Flask, GCP, Kubernetes

PERSONAL SKILLS

- Leadership Qualities And Team Work
- Ability to work under pressure
- Comfortable Working Independently
- Public Speaking
